Yoonie: How the Hotel Runs

A plain-language guide to the operating system and the AI concierge, for the business team

Part A · The Operating System

1 What Yoonie Is

Yoonie runs a hotel from the moment a guest books to the moment they leave. It takes bookings directly, works out what needs doing for each guest, sends that work to the right person's phone, and shows managers everything live: who is doing what, what is late, and what it costs.

Most hotels run on a booking system, a till, paper lists and group chats that don't talk to each other. Yoonie puts them in one place. A booking on the website instantly becomes a room to clean, a driver to send and a tour seat to fill, and every step of that work is visible and recorded.

1.1 What we promise the hotel

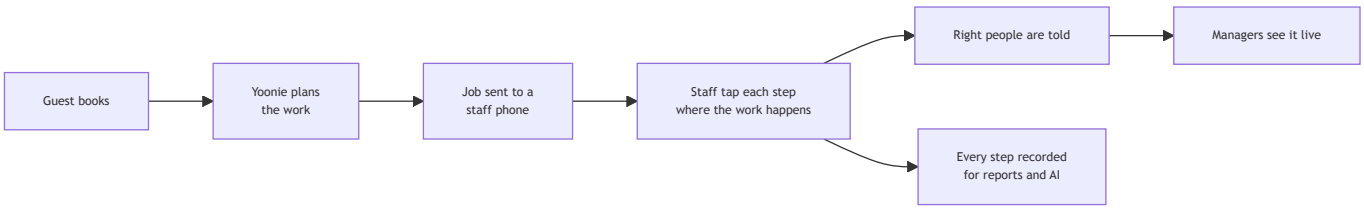

Promise	What it means day to day
The guest promise is kept	The room is ready when the guest walks in. The driver is at the arrivals door when the flight lands. The tour leaves on time.
Nothing happens blindly	Every job has a person, a deadline and a next step. When something changes, the right people are told, and only them.
Everything is on record	Every step is saved with who did it and when. That's what lets us measure, improve, and later let AI run parts of the hotel.

1.2 Who uses it

Person	Where	What Yoonie does for them
Guest	Hotel website (and soon chat)	Book a room, airport pickup, tours, spa and dining in one go
Front desk	Ops dashboard	See who is arriving, which rooms are ready, take payments
Dispatcher	Ops dashboard and phone	One list of every job in the hotel; hand out work; answer problems
Housekeeper	Phone	Today's rooms in the order guests arrive; tap Start and Done
Driver	Phone	Today's pickups with the flight, the door and the guest's name sign; tap each step
Supervisor / manager	Phone and dashboard	Inspect rooms; approve anything that costs money
Owner	Dashboard	Occupancy, revenue, what each service earns against what it costs

1.3 The loop

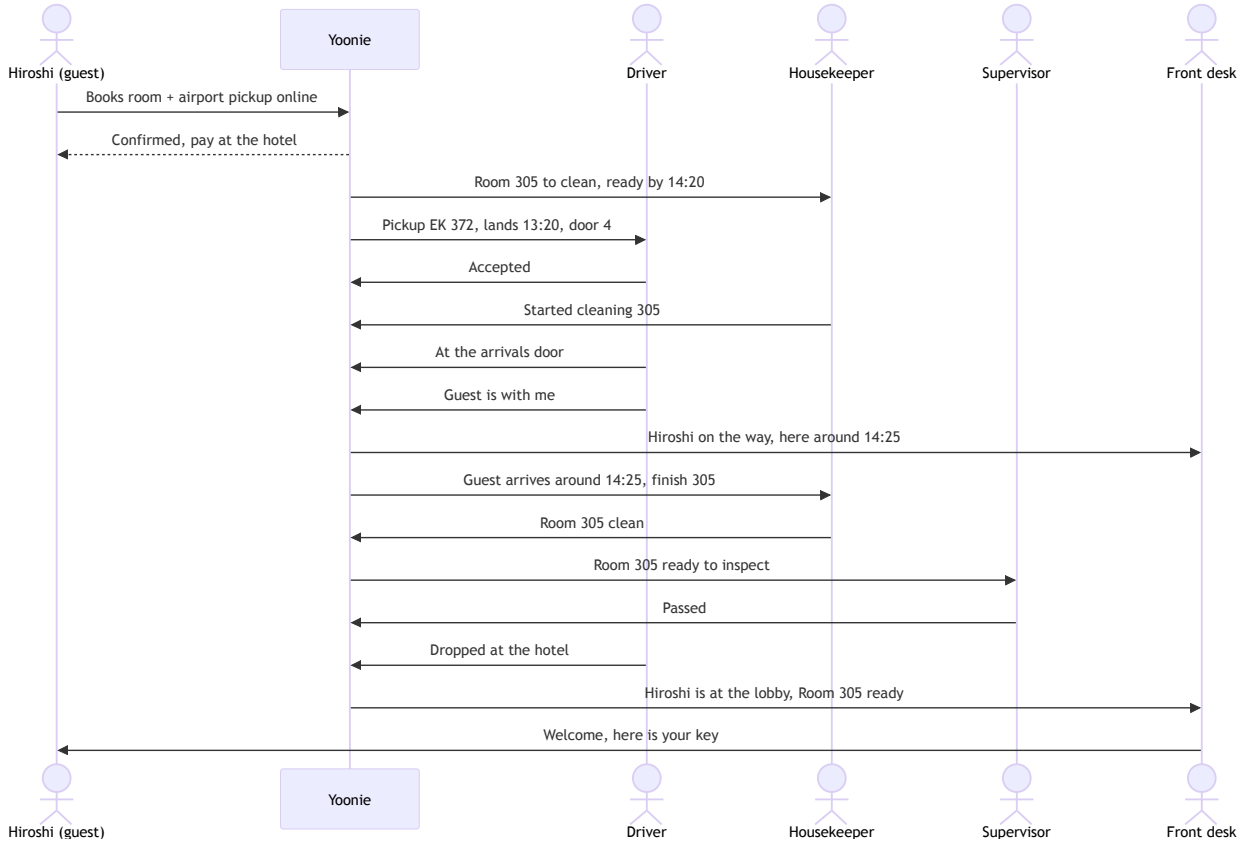

Everything in Yoonie follows the same loop:

Staff report, Yoonie routes, the desk only steps in when something goes wrong. Nobody marks a job done from behind a desk without the person doing it confirming it.

2 A Guest's Day, End to End

Hiroshi books a Deluxe Balcony room for two nights, with an airport pickup, on the hotel's website. Here is everything Yoonie does, and who does what.

Time	What happens	Who sees it
Booking	Room, pickup and any tours are booked together. Nobody else can take the same room or seat.	Guest, front desk
Same moment	Yoonie creates the jobs: room 305 to clean by 14:20, pickup for flight EK 372.	Housekeeping, driver, dispatcher
Morning	Housekeepers see rooms in the order guests arrive, not by room number.	Housekeepers
13:20	Driver is at door 4 with Hiroshi's name sign.	Dispatch board
13:40	Guest in the car: the front desk and the housekeeper get a heads-up with the arrival time.	Desk, housekeeper
14:25	Guest at the lobby; room already inspected; key handed over.	Front desk
Checkout	Front desk takes payment; the bill shows room, extras, service charge and VAT.	Front desk, owner

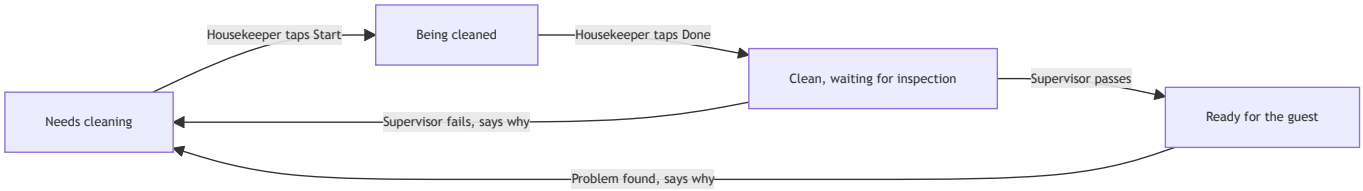

3 Bookings

Guests book everything in one checkout on the hotel's own website: room, airport pickup, tours, spa and dining. Booking direct means the hotel keeps the 15–25% an online travel agent would take, and keeps the guest's details.

- **No double booking.** While a guest checks out, their room and seats are held for 15 minutes. If they leave, everything is released automatically.
- **Pay at the hotel.** Bookings are confirmed immediately and paid at the front desk. Online payment is planned.
- **Every booking remembers where it came from** (Instagram, Google, a campaign), so we can show which marketing actually brings guests.
- **Missing flight details** are flagged so the front desk can ask the guest before the pickup day.

4 Rooms Ready on Time

A room is only ready when a supervisor has inspected it. Housekeepers clean rooms in the order guests arrive, and everyone can see whether each room will make it.

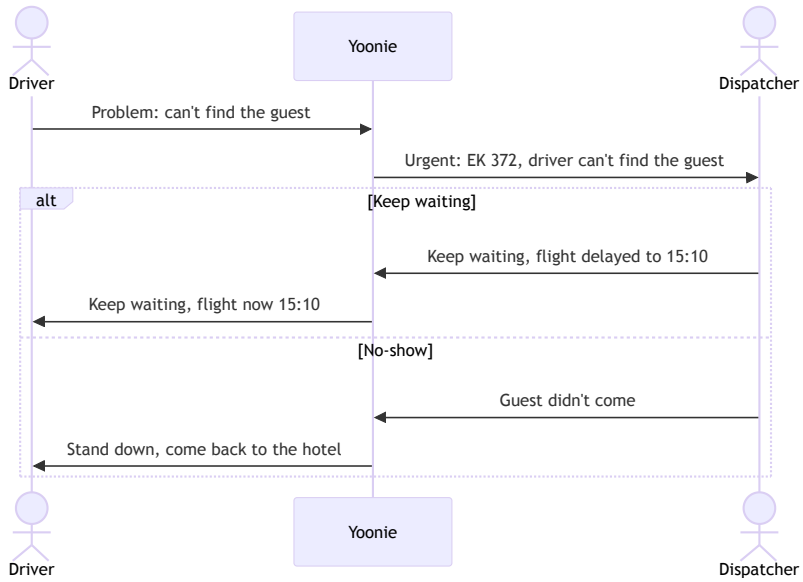

Question	Answer
Who cleans which room?	Rooms are open to any housekeeper; the first to tap Start takes it. Managers can also hand rooms out.
By when?	One hour after the guest is expected: their flight landing time, or check-in time if they have no flight.
How do we know it's on time?	Every room shows a countdown. It turns amber when time is tight and red when it's late.
What if the guest is early?	When the driver picks the guest up, the housekeeper gets an urgent alert with the new arrival time.
What if inspection fails?	The supervisor writes what's wrong; the same housekeeper gets it straight away.

5 Airport Pickups

The driver is at the arrivals door with the guest's name sign when they come out, and the hotel always knows where the guest is. The driver taps each step on their phone; the desk only steps in when something goes wrong.

Driver taps	Who is told	Why it matters
Accept	Shown on the board	Someone is definitely going
Leaving for the airport	Shown on the board	The driver is on the way
At arrivals, door 4	Shown on the board	The driver is in place before landing
Guest is with me	Front desk; housekeeper if the room isn't ready	Everyone knows when the guest will walk in
Dropped at the hotel	Front desk	Time to welcome the guest

5.1 When something goes wrong

Problems the driver can report: flight delayed, can't find the guest, vehicle problem. The desk must answer; nothing waits silently.

6 Tours: Don't Run at a Loss Without Deciding To

Each tour departure has a cost to run (boat, guide). When a departure is too empty to cover it, Yoonie flags it early so someone decides what to do, instead of finding out after it has lost money.

Sunset Cruise, costs ฿4,500 to run	Booked	Takes in	Result	Flagged?
Healthy	10 of 18	฿9,000	+฿4,500	No
Break-even	5 of 18	฿4,500	฿0	Yes: less than 40% full
Losing	2 of 18	฿1,800	−฿2,700	Yes: under the minimum of 6 guests

Decision	Who can make it	What happens next
Keep: run it anyway	Dispatcher or manager	Nothing else; the reason is recorded
Merge into another departure	Dispatcher or manager	Front desk moves the guests and tells them
Cancel the departure	**Manager only**	Front desk refunds or moves the guests and tells them

7 Money at the Front Desk

Every guest has a clear bill: rooms, extras, 10% service charge and 7% VAT, what's been paid and what's still owed.

- The front desk records each payment: cash, card, PromptPay or bank transfer, with the slip number.
- Deposits are fine; overpaying isn't possible.
- Every payment shows who took it and when.

8 What Managers See

Screen	Answers the question
Rooms	Which rooms are ready, who is in each room tonight, who is arriving, and will each room be ready in time? Board, floor map and calendar views.
Guests	Who is in house, arriving and leaving; what they've booked; what they still owe.
Services	For every transfer, tour and spa slot: how full it is, what it earns and what it costs.
Dispatch	Every job in the hotel today, most urgent first: who has it, what's next, what's late. Today's deadlines on one timeline.
Staff phones	Each person sees only their own work: housekeepers their rooms, drivers their pickups, supervisors what to inspect.

Screens refresh on their own every 10–15 seconds. A housekeeper tapping Done on their phone shows on every manager's screen within seconds.

9 Who Gets Told What

When this happens	These people are told
A room is cleaned	Supervisors and managers (to inspect it)
A room fails inspection	The housekeeper who cleaned it (urgent)
A room passes inspection	The housekeeper who cleaned it
A job is handed to someone	That person, on their phone
A pickup is booked or the flight time changes	The driver
The guest is in the car	Front desk; the housekeeper if the room isn't ready (urgent)
The guest reaches the lobby	Front desk
A driver reports a problem	Dispatcher and managers (urgent)

People are never told about something they just did themselves. Every alert is also kept in the person's inbox in the app.

10 The Rules We Never Break

These rules apply to every kind of job, for people today and robots tomorrow. A feature that breaks one is a bug, even if it seems to work.

#	Rule	In practice
1	The person doing the work reports it	Only the housekeeper, driver or guide marks their step. The desk can record it for them if they call in, and it says so.
2	One fact, one place	A room's status is changed one way only, so screens never disagree.
3	Every job is accountable	Who has it, by when, what's next, where it is, and what happens if it goes wrong.
4	Tell the right people, only them	No noise, no silence.
5	Problems must be answered	Staff raise problems from a short list; the desk must reply.
6	Steps only move forward	Safe even with bad signal: a step sent twice counts once.
7	Choices, not free text	Statuses and reasons come from fixed lists so they can be counted; notes are extra.
8	**People decide anything that costs money or affects a guest**	Cancelling a tour, a no-show, refunds, free upgrades: a person decides. AI can suggest, not decide.
9	Same rules for people and robots	A robot gets jobs and reports steps exactly like a person.
10	Each hotel only sees its own data	Staff only see and act on their own branch.

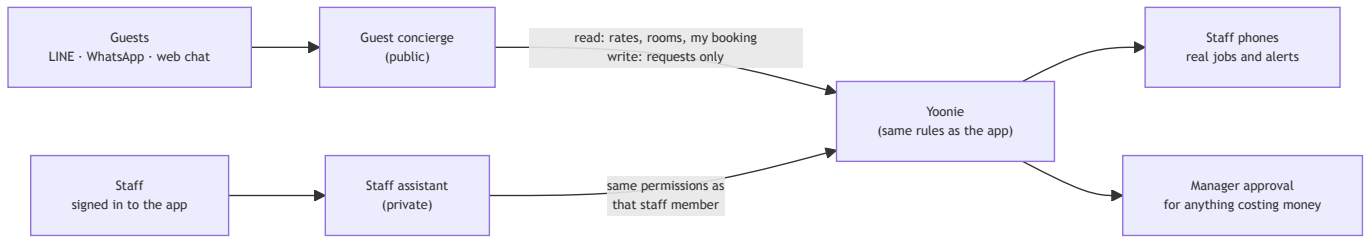

Part B · The AI Concierge

11 The Vision: A Full AI Concierge

A concierge that never sleeps, speaks the guest's language, and is connected to the real hotel: it can see live availability, the guest's booking and the state of their room, and it can create real jobs for staff. The same AI helps staff run the day, and gives owners a plain-English view of the business.

For	The AI concierge will	Example
Guests	Answer questions 24/7 in English and Thai on LINE, WhatsApp and the website	"What time is breakfast?" "Is there a pool?"
	Find and make bookings, and suggest extras	"Two nights next weekend with an airport pickup"
	Look up their booking and keep them updated	"Your driver is at door 4 with your name sign"
	Take requests that become real jobs for staff	"Two more towels to room 305" → housekeeping gets it on their phone
	Handle changes and ask a person when money is involved	"Can I check out late?" → asks the manager, replies when approved
Staff	Answer questions about today in plain words	"What's late?" "Which rooms are still dirty for 2pm arrivals?"
	Take actions through the same rules as the app	"Mark 305 inspected" (only for someone allowed to inspect)
Owners	Explain the business and recommend actions	"Sunday's cruise will lose ฿2,700; merge it with Saturday?"

11.1 How it fits together

The guest concierge and the staff assistant are **two separate assistants** that never share a conversation. The guest one can only read public information and the guest's own booking, and can only *ask* for things. The staff one acts with exactly the permissions of the signed-in staff member.

12 What's Live Today

Both assistants are live and connected to the real hotel. Every answer comes from Yoonie's live data, and every action goes through the same rules as the staff app.

Assistant	What it does today	Where
Guest concierge	Answers questions about rooms, prices, tours, spa, dining and policies; checks availability for dates; looks up a guest's own booking (pickup time and door, room, bill); passes requests to the front desk and housekeeping, who get them on their phones	Chat (n8n); website chat bubble next
Staff assistant	Answers "what's late?", "which rooms still need cleaning?", "where is the pickup?"; moves rooms, records pickup steps, answers drivers, decides tours, hands out jobs. Each person can do exactly what their role allows in the app	Signed-in staff; ops dashboard panel next

13 How We Keep It Safe

The concierge is built so that a guest can never act like staff, and staff can never do more through chat than in the app.

Safeguard	How it works
Two separate assistants	Guests and staff use different assistants with different doors. They never share a conversation or a memory.
Staff must sign in	The staff assistant only answers someone signed in to Yoonie, and acts with that person's own permissions.
A booking is private	A guest sees a booking only with its booking number **and** the email or phone on it. A wrong detail gets the same polite "not found".
Live data only	Prices, availability and bookings are read from Yoonie at the moment of the question, never from a script.
People decide money	Late checkout, upgrades, discounts, refunds and cancellations are passed to a manager; the AI never approves them.
Everything is recorded	Every request and action is saved with who and when, like any other action in Yoonie.

14 Roadmap

Phase	What guests and staff get	Depends on
1. Ask anything	Guest concierge answers questions with live rates, availability and hotel info.	**Live**; website bubble next, then LINE
2. Requests become jobs	"Towels to 305" already reaches the desk and housekeeping on their phones. Next: it becomes a tracked job, and the guest is told when it's done.	**Partly live**; job tracking next
3. My stay	Guests check their booking (**live**); next: add a pickup or tour, get pickup updates ("your driver is at door 4").	Guest identity on LINE / WhatsApp
4. Book by chat	Full booking in the conversation, paid at the hotel or online.	Online payment
5. Staff assistant	Signed-in staff ask "what's late?" and take actions by chat, with the same permissions as the app.	**Live**; dashboard panel next
6. Owner briefings	Daily summary and recommendations: occupancy, late rooms, losing tours, where guests come from.	Reports built on the recorded steps
7. Autonomy, step by step	The AI handles specific routine decisions itself (e.g. handing pool rooms to the least busy housekeeper), one approved rule at a time, per hotel.	Owner approval per rule
8. Robots	Delivery and cleaning robots take jobs and report steps like staff.	Robot integration

15 What the AI May and May Not Do

The AI may	The AI may not
Answer questions using live hotel information	Promise anything that costs money (late checkout, upgrades, discounts, refunds) without a person approving
Create requests that become jobs for staff	Mark work as done that a staff member didn't do
Recommend decisions to managers with the numbers	Decide a tour cancellation or a no-show by itself
Act for a signed-in staff member, within their permissions	Give a guest access to staff tools or other guests' details
Run an approved routine rule, labelled as "Yoonie AI" in the record	Act without leaving a record of what it did and why

Part C · Status and Decisions

16 What's Live and What's Coming

Area	Status
Direct booking (room + extras, pay at hotel)	Live
Rooms ready on time: housekeeping, inspection, countdowns	Live
Airport pickups, step by step, with problem reporting	Live on the dashboard; staff app update ready, not yet released
Tour money check and decisions	Live
Front desk payments and bills	Live
Manager screens: Rooms, Guests, Services, Dispatch	Live
Phone alerts and inbox	Live (needs alerts switched on in production)
Online payment	Planned
Tour departures and spa sessions run through the app	Designed; waiting on a decision (section 17)
Automatic escalation when something is late or unanswered	Designed
AI concierge for guests	Live (sections 11–13); website chat bubble next
AI assistant for staff	Live for signed-in staff; ops dashboard panel next

17 Decisions We Need

#	Question	Why it matters
1	Are tour guides and spa therapists our staff, or a partner's?	Our staff get app accounts like drivers; a partner's would use a simple link. Needed before tours and spa can run through Yoonie.
2	Should drivers tap 3 steps instead of 5?	"Leaving" and "at the door" don't alert anyone yet. Fewer taps until they do.
3	Guests without a flight: room ready by check-in time, or one hour after?	Today it's 15:00 for a 14:00 check-in.
4	How fast should things escalate?	For example: driver hasn't accepted 90 minutes before landing → tell the desk; problem unanswered for 10 minutes → tell the manager.
5	Which AI channel first: website chat or LINE?	Decides what we connect first in phase 1.
6	Which routine decisions may the AI make on its own, and in which hotels?	Nothing is automated until the owner approves it, rule by rule.

18 Glossary

Word	Meaning
Dispatch	The one list of every job in the hotel today, and the screen where it's managed
Job / task	One piece of work: clean a room, pick up a guest, decide on a tour
Open pool	Jobs anyone on shift can take; the first to start it owns it
Ready-by	The time a room must be inspected and ready
Inspection	A supervisor checking a cleaned room before a guest gets it
Step	One thing a staff member taps to say where the work is
Problem / answer	A staff member saying something is wrong, and the desk's reply
Folio / bill	Everything a guest owes and has paid
Direct booking	A booking made on the hotel's own site, with no agency commission

Word	Meaning
n8n	The automation tool the AI concierge runs on
